## **DETAILED ACTION**

### ***Specification***

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Drawings***

The drawings are objected to because a figure 3 shows a output at node 168 is digital and coming into element 154 (A/D) is incorrect and output at element 158 (D/A) is coming into element 150 which is also incorret. Element 154 cannot convert incoming digital signal and element 150 cannot combine both digital and analog signals together. Figure 5 has the same type of discripancies like figure # 3. Drawing corrections or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Allowable Subject Matter***

Claims 1-28 are allowable.

The following is an examiner's statement of reasons for allowance: Claims 1-28 are allowed over the prior art of record. The prior art fails to teach or suggest a phase locked loop circuit and method that implement a technique of generating a multi-bit accumulated digital phase error signal representing an accumlated value of successive values of the digital phase erro signal and generating an output signal corresponding to

the accumulated digital phase error signal, the output signal useful for controlling an oscillator within the phase locked loop.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### **Cited References**

Prior art made of record and not replied upon is considered to pertinent application's disclosures. The cited references relate to in phase locked loop error circuit.
